FF-Automation Oy can deliver complete system-level solutions and automation products.

FF-Automation with its full-equipped manufacturing facility (SAMSUNG Production technology) located in Finland together with our highly educated designing personnel FF-Automation offers our OEM – production service to you. We have expertise to design and manufacture OEM-products, Special PLC's, dataloggers etc. Our designing department can do FPGA and SoC ASIC design, embedded system design, software device drivers for various platform and Real-time operating systems, applications software for networking and wireless applications, DSP algorithm development, PCB layout, RF design, test development, design validation testing, and compliance & regulatory test engineering. The company can provide integrated methodology of design for manufacturability, assembly, test, reliability and procurement, thereby lowering costs and reducing time-to-market for end customers.

FF-Automation is pointing our focus to small and medium size of customers.

“For example you have need for 300Pcs special OEM-controllers to your machine – and you have special needs!

FF-Automation is the company who will design and produce those to you within 3-4 months! You have ready to use product within this time scale and designing costs are less than 10% from the total cost of these products and the unit price is competitive”. Says Jukka Fredriksson from FF-Automation.
